## Product Information

Hollow pin roller chains without bushes are constructed on the same principle as Galle chains i.e. the link bearing is situated between pin and outer plate, resulting in an extremely small bearing area. This offers the advantage of high breaking strength and hollow pins with large inner diameters.

### ELITE highlights

- Available based on the same chains manufactured to ISO 606 or as special chains
- All ELITE chain plates are manufactured using processes such as fine blanking and ball-drifting, so a particularly high contact ratio is guaranteed
- Solid, case hardened rollers with good wear resistance
- In general, hollow pins made of seamless precision steel tube for improved precision and wear resistance
- Many of these chains are supplied pair-matched to ensure exact parallel running, one of the main requirements that these chains must fulfil

## Applications

- Conveyor technology
- Food processing industry
- Measurement and testing technology
- Feeding and automation technology
