Product Information

Hollow pin chains from Series HB50.8 are used in many shuttle conveyor applications, especially in bakeries. A frequently recurring problem for plant suppliers and users alike are oil splashes and/or zinc abrasion resulting from sprocket tooth wear, which in turn cause serious contamination of the conveyor system.

iwis can now offer a further development of the existing hollow pin chains characterised by its longer service life and, above all, its better abrasion resistance. The better abrasion resistance of the newly developed HB50.8 ZPKDD version is achieved primarily through its optimised plastic slide bearing. In addition, thrust washers mounted between the inner and outer plates prevent undesirable tooth abrasion.
